

## Written evidence from Mr Hugh Goggin (COV0044)

The threat of mandatory vaccination in the UK grows daily as a result of Covid-19.

Following the criminal behaviour of the Nazis during and leading up to WW2, a code of conduct was adopted as follows:

### The ten points of the Nuremberg Code<sup>[edit]</sup>

---

The ten points of the code were given in the section of the verdict entitled "Permissible Medical Experiments":<sup>[5]</sup>

1. The voluntary consent of the human subject is absolutely essential.
2. The experiment should be such as to yield fruitful results for the good of society, unprocurable by other methods or means of study, and not random and unnecessary in nature.
3. The experiment should be so designed and based on the results of animal experimentation and a knowledge of the natural history of the disease or other problem under study that the anticipated results will justify the performance of the experiment.
4. The experiment should be so conducted as to avoid all unnecessary physical and mental suffering and injury.
5. No experiment should be conducted where there is an *a priori* reason to believe that death or disabling injury will occur; except, perhaps, in those experiments where the experimental physicians also serve as subjects.
6. The degree of risk to be taken should never exceed that determined by the humanitarian importance of the problem to be solved by the experiment.
7. Proper preparations should be made and adequate facilities provided to protect the experimental subject against even remote possibilities of injury, disability, or death.
8. The experiment should be conducted only by scientifically qualified persons. The highest degree of skill and care should be required through all stages of the experiment of those who conduct or engage in the experiment.
9. During the course of the experiment the human subject should be at liberty to bring the experiment to an end if he has reached the physical or mental state where continuation of the experiment seems to him to be impossible.
10. During the course of the experiment the scientist in charge must be prepared to terminate the experiment at any stage, if he has probable cause to believe, in the exercise of the good faith, superior skill and careful judgment required of him that a continuation of the experiment is likely to result in injury, disability, or death to the experimental subject.

There is compelling evidence to show that vaccinations carry many risks to health as can even be gathered from reading the product information leaflet that comes with each vaccine and the compensations paid out to victims of vaccinations. These risks define vaccination as an experiment in the pursuit of a risk-free vaccine. All the while there is a risk, the Nuremberg Code applies and it would be a crime if vaccination were to be imposed upon an individual and their children against their will.

I would like to draw attention to the 10<sup>th</sup> point specifically. If a vaccine's product information leaflet can state that death is a risk, it is a demonstrable crime that scientists have continued with this experiment at all. The Hippocratic Oath demands: First do no harm.

I will defend the right to not take part in this experiment until I die.
