

## **Desmond Moore – Written Evidence (LBC0089)**

1) Companies should be encouraged to let employees work from home in the short term and also longer term. It would help reduce virus but also help the environment.

2) Track and Trace Apps are now available. Each business with employees or customers should have business track and trace app on dedicated business phone so customers/ employees can link their phone to the business phone. When going to restaurant you are invited to allow you phone to be linked to restaurant T&T phone so that if you subsequently get the virus the restaurant will be notified. Also all restaurant employees would go through a similar procedure each day. T&T Phones could be used in dentists, hairdressers, aeroplanes, any business with employees or employees and customers.
